

FLIES ARMAGEDDON

Three flies, three brains — 165,122 neurons each — racing for the sugary centre.

Pick a fly. Cheer. Bet.

FLIES ARMAGEDDON

1. BRAND essence

Flies Armageddon is a spectator race built on a real fruit-fly connectome sim: competitive, funny, slightly chaotic, but grounded in science. Tone is arcade energy (Worms-style mayhem) with warm wood-and-cream game UI — not sterile lab chrome.

- **Promise:** watch tiny brains compete; cheer, bet, survive the chaos.
- **Personality:** loud, playful, lucky, slightly apocalyptic (stone wordmark, explosions in key art).
- **Audience:** crypto spectators, bio-curious gamers, chaos enjoyers.

TAGLINES (APPROVED)

- Three flies, three brains — 165,122 neurons each — racing for the sugary center. Pick a fly. Cheer. Bet.
- Welcome to Flies Armageddon (enter gate)
- COMING SOON (marketing beats)

SOCIAL

X: <https://x.com/Farmageddon> (handle may change; keep code in sync with X_HREF in src/arena.js).

2. LOGOS & MARKS

Asset	File	Use
Primary wordmark	public/Flieslogo.png	Lobby overlay, loading spinner, in-game brand header. Alt text: “Flies Armageddon”.
Hero / key art	public/FliesImageLogo.png	OG/Twitter share image, loading backdrop, social banners, “coming soon” art.
Arena floor mark	public/Farmageddoncom.png	Centre disc on dish & desert maps (~27.6% of floor texture width).
Wood frames (race UI)	container-headless.png, LobbyContainer.png, LandingContainer.png, button.png	See §5 — primary product chrome; not optional skin.
Favicon	public/favicon-512.webp	Browser tab & PWA icon.

Hero on sky

Wordmark on cream

Floor mark

Avoid low-contrast backgrounds

CLEAR SPACE

Keep at least the height of the “F” in FLIES as clear space around the wordmark. Do not outline, recolor, or squash the logo below 120px wide on web.

3. COLOR

RACE UI (PRIMARY PRODUCT SKIN)

 Wood cream #fff8ee Boards, chips, panels	 Wood ink #2a1810 Body text	 Wood line #5a3a22 Borders, rules
 Race sky #c5dce8 Page / arena backdrop	 Race outline #9aa3b2 Legacy grey stroke (lab panels)	 Ink dim rgba(42, 24, 16, .72) Secondary copy

FLY RACER PALETTE (DEFAULT TRIO)

 Amber #ffb347	 Blue #5ac8fa	 Lime #a3e635
---	--	--

Vitals rows & nametag hover cards tint with --fly: 16% fly + cream fill, 50% fly + wood-line border.

GAMEPLAY ACCENTS

 Energy bar #c9922a	 Health bar #3d9a52	 Accent (CTA) #ffb347 Primary buttons
---	--	--

LAB / CONNECTOME UI (SECONDARY)

Dark glass for brain viewer & panel: bg #07090f, panel rgba(12, 15, 24, .88), text #d7dbe6. Use only outside race mode.

4. TYPOGRAPHY

Role	Family	CSS
Display / titles	Luckiest Guy	--race-title · public/fonts/luckiest-guy.woff2
Body / stats	Helvetica Neue, Arial	--race-body
Tabular data	inherit	font-variant-numeric: tabular-nums (clocks, stakes)

LUCKIEST GUY SAMPLE HEADLINE

Body sample: behaviour labels, pool copy, and nametag stat grids use 12–13px Helvetica with wood ink on cream.

ON A CREAM PLAQUE (INFOGRAPHICS)

Do **not** use Luckiest Guy or white stroke on the parchment. Board titles and column headers are Helvetica/Arial extra-bold, all caps, wood ink (#2a1810 / #5a3a22). Luckiest Guy stays on the hanging wordmark PNG and on in-game shouts (winner/chaos) over the 3D scene.

WINNER / CHAOS DISPLAY TYPE

AMBER WINS

White fill, 2–3px dark stroke, drop shadow — see .race-announce-text and chaos toast in arena.css.

5. WOODEN CONTAINER SYSTEM

Flies Armageddon race mode is instantly recognizable by **hand-painted wood frames** — not flat cards or glassmorphism. All race chrome PNGs live in `public/`, preloaded in `src/preload-site.js`, and wired in `src/arena.css` under `body.race`. Pair frames with **race sky** (`#c5dce8`) page backdrop and **wood cream** (`#fff8ee`) content areas inside the boards.

PRODUCTION ASSETS (USE THESE)

Asset	Pixels	Technique	In-product use
container-headless.png	1175×739	border-image nine-slice	Scoreboard, brain panel, profile wallet — HUD that stays on screen during races
LobbyContainer.png	1889×2115	border-image nine-slice	Lobby overlay, results, wallet picker — tall “garden” frame with leaves/grass corners
LandingContainer.png	1198×766	Single background: contain	Enter gate dialog (welcome / token / Enter button)
button.png	1257×384	Stretch-fit background on CTA	Primary wood pill buttons (Enter, connect flows on frame)

Legacy / do not ship in new UI: `container.png` (1800×1773, older framed board) remains preloaded for cache warmth only — production HUD uses **headless** variant. `ContainerHeadless.png` is a duplicate filename casing of `container-headless.png`; canonical URL is lowercase `/container-headless.png`.

NATIVE PROPORTIONS (DO NOT SQUASH)

Asset	Native px	Ratio	Shape	How to size
LobbyContainer.png	1889×2115	~0.89:1	Portrait garden board	Keep near this ratio. Nine-slice grows the cream <i>center</i> a little; never force it into 3:2 / 16:9.
LandingContainer.png	1198×766	~1.56:1	Landscape stone plaque	aspect-ratio: 1198 / 766; background-size: contain. Closest match to a 3:2 social canvas.
container-headless.png	1175×739	~1.59:1	Landscape HUD	Nine-slice OK for HUD width; stay roughly landscape. Do not stretch into a square or a strip.
button.png	1257×384	~3.27:1	Wide CTA slab	background-size: contain on a short wide button. Never cover.

Flieslogo.png	954×725	~1.32:1	Stacked stone wordmark	height: auto; object-fit: contain. Hang above lobby/landing — never squash into a column.
---------------	---------	---------	------------------------	--

CSS Tokens (RACE)

```
--wood-slice: 90 88 92 88 · --wood-border: 30px (26px on narrow)
--lobby-slice: 17% 21% 24% 21% · --lobby-border: 70px (56px on narrow)
--wood-board-pad-bottom: 16px · Enter card aspect: 1198 / 766
```

5A. CONTAINER REFERENCE (VISUAL)

container-headless.png

Cream board + wood rail, no decorative header. Slice 90 88 92 88, border 30px. Content sits on cream; keep copy out of the bottom wood rail (use --wood-board-pad-bottom).

LobbyContainer.png

Full garden frame: grass/leaf corners, wood edges. Slice 17% 21% 24% 21%, border 70px. Hang Flieslogo.png above top edge (.lobby-brand, ~78px breathe padding).

LandingContainer.png

Wide landing plaque. Fitted with background-size: contain; safe copy box ≈ inset 11% L/R, 34% top → 14% bottom (.enter-fill). Wordmark at top: -8% centered.

button.png

Orange wood CTA slab. White Luckiest Guy label + warm shadow 0 2px 0 #7a3a00. Scale hover 1.08 — do not swap to flat CSS buttons in race mode.

WHEN TO USE WHICH FRAME

- **Headless** — persistent HUD, smaller footprints, score/clock/brain traces; pairs with fly-tinted chips inside.
- **Lobby** — modal moments: betting lobby, race results, wallet choice. **Portrait only**. Wordmark hangs above the top edge, not inside the cream.
- **Landing** — enter gate and **landscape social comps** (3:2 / 16:9). One plaque, native ratio, wordmark at top: -8% centered (~36% of plaque width).

5C. HARD LAYOUT RULES

These failed in the first rebrand infographic: a portrait lobby nine-sliced onto a 1500×1000 canvas, the stacked wordmark used as a giant left column, and copy sitting on the grass rail / outside the board.

Do

- Pick the frame whose *native* ratio matches the canvas (landing ≈ 3:2; lobby ≈ portrait).
- Keep all type, logos, and swatches on the **cream inner board** — never on wood, leaves, grass, or rocks.
- Size logos with width + height: auto + object-fit: contain. Preserve 954×725 for the wordmark.
- Landing **enter gate** copy uses inset 11% L/R, 34% top, 14% bottom.
- Landing **infographics** use a wider cream: ~12% L/R, ~20% top, ~12% bottom, content optically centered — not bunched under the wordmark with empty parchment below.
- Letterbox a frame on sky/cream if the canvas is the wrong shape. Empty sky is correct; stretched wood is not.

Don't

- Nine-slice LobbyContainer across a wide 3:2 or 16:9 rectangle.
- Put footers, handles, or headlines outside / overlapping the frame.
- Put a second logo, hero explosion, or URL footer inside a plaque that already has the wordmark on top.
- Use white Luckiest Guy + stroke for titles sitting on cream (that style is for in-scene shouts).
- Use background-size: cover or fill on chrome PNGs.
- Set only width or only height on the wordmark in a way that changes aspect.

Nine-slice is not a free stretch. border-image tiles the *center* so a HUD can grow a few dozen pixels. It does not license changing a portrait garden board into a landscape poster.

5B. CONTAINERS IN MARKETING

Social art should **feel** like the game: sky backdrop, cream boards, wood edges — at **native container ratios**.

- **3:2 / 16:9 comps:** LandingContainer.png at 1198×766, contain, centered on #c5dce8. Do not use lobby.
- **Portrait stories / posters:** LobbyContainer.png near 1889×2115. Wordmark hangs above.
- **Composites:** key art or screenshots sit *inside* the cream; never crop off corner leaves.
- **Screenshots:** race HUD with headless panels at ~1.59:1 — that is the live brand.
- **Do not** replace wood with generic rounded rectangles, Material cards, or lab dark glass (#panel) in race marketing.
- **Host gate** is an exception (dark grey outline UI) — not for public marketing hero shots.

CHIPS, NAMETAGS & MOTION (IN-FRAME UI)

Nametag pills: dark translucent fill, 2px fly-color border, Luckiest Guy name. Hover stat card = vitals chip (cream + --fly tint, 12px radius, shadow 0 8px 22px rgba(42,24,16,.28)). Panel motion: fold ease cubic-bezier(0.34, 1.2, 0.64, 1), HUD slide 0.45s; lobby card enter scale raceCardEnter + idle breathe on enter gate.

FILE CHECKLIST (CONTAINERS)

- public/container-headless.png · LobbyContainer.png · LandingContainer.png · button.png
- Slice values and selectors: src/arena.css (body.race #scoreboard, .race-card, #enterGate .enter-card, #enterBtn)

6. SOCIAL & FORMAT SYSTEMS

One visual language across link previews, profile banners, and feed infographics: **sky** → **cream** backdrop, **FliesImageLogo** hero art, **Flieslogo** wordmark, **Luckiest Guy** for shout lines. Export masters at **2×** when platforms allow (e.g. 3000×2000 for 3:2).

FORMAT MATRIX

System	Canvas (px)	Ratio	Primary use	Repo master
3:2 infographic / link art	1500×1000 (ship 1245×844)	3:2	OG/Twitter image, loading screen, feed stills, decks	FliesImageLogo.png
X profile banner	1500×500	3:1	x.com header	Export from banner template (below)
16:9 announcement	1920×1080 (min 1280×720)	16:9	“Coming soon”, YouTube thumb, Discord	flies-armageddon-coming-soon.jpg
1.91:1 link crop	1200×630	~1.91:1	Facebook / Slack / LinkedIn previews	Center-crop from 3:2 master
Square post	1080×1080	1:1	Instagram / Threads still	Crop hero + wordmark stack
Vertical story	1080×1920	9:16	Stories / Shorts cover (optional)	Sky fill + hero lower two-thirds

Site default today: index.html / arena.html set og:image and twitter:image to /FliesImageLogo.png (1245×844, ~3:2). Keep new OG exports at 3:2 unless you intentionally add a separate 1200×630 asset.

6A. 3:2 INFOGRAPHIC SYSTEM

Master canvas: 1500×1000 px (3:2). **Hero file:** public/FliesImageLogo.png (1245×844) — scale proportionally. **Infographic chrome:** land the layout on LandingContainer.png at native 1198×766 (letterboxed on sky). Do not nine-slice the portrait lobby onto this canvas.

LAYOUT WIREFRAME

Dashed box = 5% safe margin (75 px at 1500 width).
Keep logos and type inside.

LAYER STACK (TOP → BOTTOM)

1. **Headline** — On full-bleed hero art only: Luckiest Guy, white + stroke. On a landing plaque, use wood-ink extra-bold all caps (§6d) instead.
2. **Wordmark** — Flieslogo.png hangs on the top rail. Native 954×725. Never a column inside the board; never a second hero PNG inside the cream.
3. **Hero** — flies + explosion key art; focal point slightly above vertical center (~42% from top).
4. **Background** — gradient #c5dce8 → #fff8ee or full-bleed art with sky preserved at top.
5. **Footer strip** (optional) — tagline or x.com/... in Helvetica 24–28 px, wood ink on cream bar.

TYPOGRAPHY ON ART

- Headline: 72–120 px at 1500 width (scale with canvas).
- Subcopy: Helvetica/Arial 28–36 px, #2a1810 or white on dark smoke only.
- Tabular stats (stakes, clock): tabular nums, same as in-game HUD.

EXPORT

- **PNG** for UI / crisp logos; **JPG** 82–88% for photo-heavy comps.
- Embed sRGB; no neon Sugar Run palette (retired).

16:9 VARIANT (Announcements)

Extend or letterbox the 3:2 hero: place wordmark + “COMING SOON” in upper third; keep flies in center. Reference: flies-armageddon-coming-soon.jpg (1280×720). Target **1920×1080** for new exports.

Three brains. Pick a fly. Cheet, Bet.

6B. 1500×500 BANNER SYSTEM (X / WIDE HEADERS)

Canvas: exactly 1500×500 px (3:1). Wide, low crop — design for *bleed*, not for dense copy.

SAFE ZONES (X PROFILE)

- **Lower-left ~28% × 55%** — profile photo covers this on X; no logos or critical text.
- **Inner ~88% × 80%** — keep wordmark and headlines here (dashed red).
- Prefer **horizontal wordmark** or single-line Luckiest Guy centered; avoid small type (< 20 px at 1500 width).

COMPOSITION RECIPES

A — Key art bleed: Crop FliesImageLogo to 3:1 (object-position ~55% center). Soft sky at top, action in middle-right. Optional small wordmark right of center.

B — Cream band: Full-width sky gradient top 60%; bottom 40% wood cream with centered Flieslogo (height ≈ 200–240 px) + one tagline line.

C — Event strip: Luckiest Guy date/"LIVE" on left third (in safe zone, above avatar); hero art right two-thirds.

EXPORT CHECKLIST

- Filename pattern: flies-armageddon-banner-x-1500x500.png
- Test on mobile X profile — avatar is circular, bottom-left.
- Match URL in bio to X_HREF in product (<https://x.com/Farmageddon> until handle changes).

OTHER WIDE PLACEMENTS

Placement	Size	Notes
Discord server banner	960×540	Scale down from 16:9 or center slice of 3:2.
Open Graph (alt crop)	1200×630	Center crop; verify headline not clipped in Slack/iMessage.
Email hero	600×400	Half-scale 3:2; max 200 KB JPG.

6C. SQUARE & FEED CROPS

1080*1080 (1:1)

Crop center-weighted on hero flies. Stack wordmark in lower 25% on cream gradient. One headline only.

IN-FEED STILL (3:2)

Use full infographic master — no extra border. Caption voice: short, present tense; link to live race or pool.

Alt text pattern: “Flies Armageddon — [fly names] racing for the sugar” or “COMING SOON — Flies Armageddon”.

ANIMATED / VIDEO

Match 16:9 or 9:16 safe zones; keep wood UI out of video unless recording actual product. Gong / chaos SFX are in-product only unless promoting a clip.

6D. PLAQUE INFOGRAPHIC RECIPE (CANONICAL)

Feed infographics on LandingContainer follow this layout — not a two-column article with a hero thumbnail. Reference:

BREAKDOWN

Layer	How theirs works	What to avoid
Chrome	Sky gradient, native landing plaque, wordmark hangs on the top rail only.	Lobby stretch; wordmark as a giant inside column.
Title	One line, centered, all caps, wood-brown extra-bold. Names the sheet.	White Luckiest Guy + black stroke on cream; stacked headlines + a paragraph.
Body	Three equal columns, shared top edge. Bold column label + icon + 2–4 short lines.	Asymmetric 1fr + thumbnail; wrapping sentences; nested share-art PNG.
Icons	Simple monochrome marks in wood ink, one per line, aligned.	Orange dotted bullets; decorative clip-art.
Palette	Five swatches, one row, centered under the columns as a closer.	Swatches glued to a side stack; a fifth chip wrapping alone.
Density	Content optically centered in the parchment with even cream around it.	Enter-gate 34% top inset (leaves a dead lower board); footers and URLs inside the plaque.
Brand marks	Wordmark on top is enough. No second FliesImageLogo inside.	Hero art competing with the hanging logo; file-name captions.

GRID

- Safe cream $\approx$ **12% left/right, 20% top, 12% bottom** of the plaque (looser than enter-gate fill).
- Title spans full cream; then grid-template-columns: 1fr 1fr 1fr with equal gap.
- Max ~3 items per column. Labels wrap to two lines only if needed; no paragraphs.
- Swatch row: 5 chips, no wrap, centered, ~8–12px above the inner bottom of the cream.

7. VOICE & COPY

- Short sentences. Present tense. Exclamation sparingly — chaos toasts can be louder than UI labels.
- Death causes are full phrases (“killed by lightning”), never single nouns.
- Science is real but not preachy: neuron counts and “brain” language are fair game; don’t promise real-money outcomes beyond on-chain pool rules.
- Brand name is always **Flies Armageddon** (two words, title case). Not “Sugar Run” (retired).

8. DO / DON'T

Do

- Use Flieslogo on cream or sky backgrounds.
- Use FliesImageLogo for social/Open Graph.
- Tint UI with racer fly colors via --fly.
- Use the four wood container PNGs (§5) for race UI and on-brand comps.
- Keep wood frames; don’t replace with flat Material cards in race mode.

Don't

- Reuse retired card.webp Sugar Run neon art.
- Stretch or recolor the stone wordmark gradients.
- Nine-slice a portrait lobby frame onto a landscape social canvas.
- Let type, handles, or footers sit on wood rails, grass, or outside the plaque.
- Drop hero art or a second wordmark inside a plaque infographic (the hanging logo is enough).
- Set plaque titles in white Luckiest Guy; use wood-ink extra-bold on cream.
- Place wordmark on busy mid-tone photos without a cream plate behind it.
- Mix lab dark theme into race lobby without intentional contrast (e.g. host gate exception).

FILE CHECKLIST FOR MARKETING

- public/container-headless.png, LobbyContainer.png, LandingContainer.png, button.png — race wood system (§5)
- public/FliesImageLogo.png — 1245×844 (~3:2) OG / hero / infographic master
- public/Flieslogo.png — 954×725 wordmark for lobby-style lockups
- public/flies-armageddon-coming-soon.jpg — 1280×720 (16:9) “COMING SOON”
- docs/social/plaque-infographic-reference.jpg — canonical 3-column plaque layout
- public/flies-armageddon-rebrand-infographic.png — 1500×1000 rebrand infographic (npm run brand:rebrand-infographic)
- flies-armageddon-banner-x-1500x500.png — create & add to public/ when ready
- docs/brand-system.pdf — this document (npm run brand:pdf)
